^b40 CFR Part 141, *National Primary Drinking Water Regulations*, Subparts B and G. The drinking water standards are presented strictly for reference purposes and have regulatory applicability only for public water supplies.

^cDOE. “*Derived Concentration Technical Standard, DOE-STD-1196-2011, April 2011.*”

^dExcludes radon and uranium.

^eThese values are not maximum contaminant levels but are concentrations that result in the effective dose equivalent of the maximum contaminant level for gross beta emissions, which is 4 mrem/year.

^fApplies to combined ²²⁶Ra and ²²⁸Ra.

^gMinimum of uranium isotopes.

^aE1 = EPA Primary Drinking Water Standards; E2 = EPA Secondary Drinking Water Standards; T = TDEC domestic water supply criteria.

^bFor each parameter, the first recreational criterion is for “water and organisms” and is applicable on the Oak Ridge Reservation (ORR) only to the Clinch River because the Clinch is the only stream on ORR that is classified for both domestic water supply and for recreation. The second criterion is for “organisms only” and is applicable to the other streams on ORR. TDEC uses a 10⁻⁵ risk level for recreational criteria for all carcinogenic pollutants (designated with “(c)” under “Chemical” column). Recreational criteria for noncarcinogenic chemicals are set using a 10⁻⁶ risk level. (Note: All federal recreational criteria are set at a 10⁻⁶ risk level.)

^cCriteria are expressed as dissolved.

^dCriteria are expressed as dissolved and are a function of total hardness (mg/L). Criteria displayed correspond to a total hardness of 100 mg/L.

^eCriteria are expressed as a function of pH; values shown correspond to a pH of 7.8.
