[a]Only the radionuclides included in the Oak Ridge Reservation monitoring programs are listed. Unless labeled otherwise, units are pCi/L.

[b]40 CFR Part 141, National Primary Drinking Water Regulations, Subparts B and G. The drinking water standards are presented strictly for reference purposes and have regulatory applicability only for public water supplies.

[c]Four percent of the derived concentration standard represents the DOE criterion of 4-mrem effective dose equivalent from ingestion of drinking water.

[d]DOE "*Derived Concentration Technical Standard, DOE-STD-1196-2011, April 2011*."

[e]Excludes radon and uranium.

[f]These values are not maximum contaminant levels but are concentrations that result in the effective dose equivalent of the maximum contaminant level for gross beta emissions, which is 4 mrem/year.

[g]Applies to combined ^{226}Ra and ^{228}Ra.

[h]Minimum of uranium isotopes.

[a]E1 = EPA Primary Drinking Water Standards; E2 = EPA Secondary Drinking Water Standards; T = TDEC domestic water supply criteria.

[b]For each parameter, the first recreational criterion is for "water and organisms" and is applicable on the ORR only to the Clinch River because the Clinch is the only stream on the Oak Ridge Reservation (ORR) that is classified for both domestic water supply and for recreation. The second criterion is for "organisms only" and is applicable to the other streams on the ORR. TDEC uses a 10^{-5} risk level for recreational criteria for all carcinogenic pollutants (designated with "(c)" under "Chemical" column). Recreational criteria for noncarcinogenic chemicals are set using a 10^{-6} risk level. (Note: All federal recreational criteria are set at a 10^{-6} risk level.)

[c]Criteria are expressed as dissolved.

[d]Criteria are expressed as dissolved and are a function of total hardness (mg/L). Criteria displayed correspond to a total hardness of 100 mg/L.

[e]Criteria are expressed as a function of pH; values shown correspond to a pH of 7.8.
